

Turn On Texting in Your Dashboard

Complete TextBee setup & troubleshooting for your Android phone
Foreclosure Recovery Inc. • Agent Setup Guide

What this does

Your dashboard sends text messages to homeowners **through your own Android phone**, using a free app called **TextBee**. Once connected, the Text button on your Leads tab works and messages go out from your own number. This guide is everything you need — setup **and** troubleshooting. Plan about 15 minutes.

Important: Do NOT install “TextBee” from the Google Play Store — that is a different ad-supported app and it will not work with your dashboard. Download the real app straight from **textbee.dev/download** as shown below. And don’t worry — setting this up cannot harm your account; it only connects your phone for texting. Your leads and voicemail are untouched.

Before you start

- An **Android phone** (version 7.0 or newer) with the SIM/number you will text from.
- The phone on Wi-Fi or cell data.
- About 15 minutes, one time.

Part 1 — Create your free TextBee account

1. On a computer or your phone browser, go to **textbee.dev** and click **Get Started / Register**.
2. Sign up with your email and a password (or “Sign in with Google”). This is your TextBee dashboard.

Part 2 — Download and install the app (on the Android phone)

1. On the **Android phone**, open **Chrome** and go to **textbee.dev/download**. Tap **Download** — it saves the app file (an “.apk”).
2. Open the downloaded file (tap it, or find it in your **Downloads**).
3. If Android says “*your phone is not allowed to install unknown apps from this source*,” tap **Settings**, turn on **Allow from this source**, tap back, then **Install**. (This is normal for apps not from the Play Store.)
4. If a **Play Protect** box appears, tap **Install anyway** — the app is safe, it is just not from the Play Store.
5. When it finishes, tap **Open**.

Part 3 — Give it permission to text

1. When the app asks, tap **Allow** for **SMS** (send and receive) and for **Phone** if asked.
2. These permissions are required — without them the app cannot send texts for you.

Part 4 — Connect the app to your account

1. On a computer (or the phone browser), open **app.textbee.dev/dashboard** and log in.
2. Click **Register Device** — a **QR code** appears.
3. In the **TextBee app** on your phone, tap **Scan QR code** and point it at the screen. (No camera? Instead click **Generate API Key** on the dashboard and **paste that key** into the app.)
4. The app should now show **Connected / Online**.

Part 5 — Copy your two codes into your dashboard

1. On the TextBee dashboard, click **Generate API Key** and **copy** it — this is your **API Key**.
2. Click **Devices** and **copy** your **Device ID** (a long string of letters and numbers).
3. Log into your Foreclosure Recovery dashboard, go to **Settings** → **SMS Gateway**, paste in the **API Key** and the **Device ID**, and click **Save**.

Want us to finish it for you? Do Parts 1–4, then reply to our email with your **API Key** and **Device ID** and we will paste them in and switch on your texting.

Keep texting working (do these once)

- The phone must stay **powered on, with the app running, and connected to the internet** — every text leaves through the phone itself.
- Turn **off battery optimization** for TextBee so Android does not close it: **Settings** → **Apps** → **TextBee** → **Battery** → **Unrestricted**.
- **Allow background activity / autostart** for TextBee (same Apps menu) so it stays connected when the screen is off.
- Do not **force-close** or **swipe away** the app.

Troubleshooting

Problem	What to do
Texts will not send / "gateway not connected"	Open the TextBee app and make sure it shows Connected / Online. If not, tap to reconnect and check the phone's internet.
"Install blocked" during download	Turn on Allow from this source (Part 2, step 3), then install again.
Play Protect warning	Tap Install anyway. The app is safe; it just is not on the Play Store.
App asks for no permissions / can't send	Phone Settings → Apps → TextBee → Permissions → SMS → Allow.
Works, then stops overnight	Battery is closing it. Set Battery to Unrestricted and allow background/autostart (see above).

Dashboard rejects the codes	Re-copy the API Key and Device ID with no extra spaces before or after, and Save again.
App will not install at all	The phone must be Android 7.0 or newer. Check Settings → About phone.

Still stuck? Reply to our email or call the National Asset Recovery Agent Hotline (888) 907-3234 and we will walk you through it or connect it for you. — Foreclosure Recovery Inc.
